

Insight Data Sheet

What is Insight?

Insight by Baxter, is an inventory optimization service that provides you with a one-time inventory analysis identifying opportunities to reduce your inventory cost, improve service levels and help you plan for changes in your supply chain.

How do we do it?

Baxter's experienced planning team will review a snapshot of your current demand along with your inventory and logistics network and perform a "baseline" optimization. You will be provided with a complete report that includes target stock levels for all stock locations, exchange curves illustrating how changes in inventory will impact service levels, identification of excess inventory and more.

All analysis is performed by Baxter's experienced planning staff using Prophet™ by Baxter, our software suite focused on inventory planning and execution. Take confidence in results coming from a solution that is relied on by Fortune 1000 companies and not from manually prepared spreadsheets or hunches.

Insight is also a great way to explore potential savings from modifications to your supply chain including changes to your logistics network (adding a new warehouse), changes in lead time (modifying source or transportation modes), and other variations.

Benefits

Right Products, Right Place

Improve service levels and minimize inventory investment with target stock levels calculated for each product and location based on Baxter's unique *Total Cost Optimization* algorithm.

Reach Service Targets

Make informed decisions on improving service levels with a complete analysis of the inventory investment required to improve your fill rates.

Minimize Uncertainty

Understand changes to your supply chain before you execute them. Eliminate uncertainty on how changes to stocking locations or transportation mode will affect your inventory investment.

Get Results Quickly

Analysis is delivered quickly with limited investment of your IT resources. Insight projects are executed using a proven methodology based on 20 years of experience performing inventory optimization.

Results experienced by organizations after Insight analysis include:

- Reduced inventory investment due to lower target stock levels by 5%-20%
- Improved fill rate from optimal location and reduced misses by 10%-25%

Insight Provides:

- An inventory analysis that identifies opportunities to reduce inventory cost.
- An accurate inventory plan to reach your target service levels.
- A precise way to explore potential savings from changes in your logistics network or changes in lead time.
- A fast analysis with limited investment of your IT resources.

About Baxter Planning

Baxter provides cloud-based software and service solutions for inventory planning across complex, global supply chains.
